“Safe Drinking Water in Private Wells - Learn about proper management of private water wells” covered well basics and construction, maintenance, and management of your well, solving water quality and quantity problems.

The average homeowner often does not know much about their own wells, but we are each responsible for the individual well that provides water to our homes. The members of Sherborn’s Groundwater Protection Committee strongly encourage all Sherborn residents to learn about proper management of our private water wells.

This complimentary workshop was conducted by the Rural Community Assistance Partnership (RCAP), a non-profit organization that provides free technical assistance to rural water and wastewater communities and residents, through US EPA funding. See: <https://www.rcapsolutions.org/private-wells/>

For specific questions about the workshop, please contact: Jim Starbard (978-502-0227, jstarbard@rcapsolutions.org). For questions specific to your home’s well please contact the Sherborn Board of Health (508-651-7852,

health@sherbornma.org). For general Sherborn groundwater questions, please contact the Sherborn Groundwater Protection Comm: gpc@sherbornma.org
