Subject: 31 Hunting/41 N Main Street conditioning wetlands

*****This message originated outside your organization*****

For the record before the hearing closes, proposed conditions:

1. During any water supply testing, the groundwater levels in wetland resources both on site and upgradient and down gradient should also be monitored continuously and possibly in a similar way to how nearby wells will be monitored. It is suggested that at least four sites in the on-site wetlands as well as at least six sites in nearby wetland resources.
2. make sure that the local wetlands bylaw regulation related to isolated wetlands is not waived.

Regards,
Michael Lesser
