

Sherborn Groundwater Protection Committee – statement approved at May 5,2021 meeting:

The Groundwater Protection Committee agrees with and supports the letters to the Zoning Board of Appeals from the Board of Health, Conservation Commission, and Planning Board. The Groundwater Protection Committee has serious concerns that the density of the proposed projects (31 Hunting Lane and 41 North Main Street) and the geologic conditions of the site will not support sustainable groundwater withdrawal, stormwater infiltration, or wastewater treatment and disposal. We anticipate that such development would result in negative impacts to the abutters and the fragile groundwater resources of the neighborhood and Town.
